## **Claim Amendments**

This listing of claims will replace all prior versions, and listings, of claims in the application.

## **Listing of Claims**

- Claim 1. (Currently Amended) A polymer composition consisting essentially of: a mixture of the following components:
- a) a low-molecular-weight (meth)acrylate (co)polymer composed of 50 to 90 % by weight of methyl methacrylate, from 10 to 20 % by weight of styrene, and from 5 to 15 % by weight of maleic anhydride having a solution viscosity in chloroform at 25° C (ISO 1628 Part 6) of 45 to 55 ml/g,
  - b) an impact modifier based on crosslinked poly(meth)acrylates,
- c) a relatively high-molecular-weight (meth)acrylate (co)polymer composed of 50 to 90 % by weight of methyl methacrylate, from 10 to 20 % by weight of styrene, and from 5 to 15 % by weight of maleic anhydride having a solution viscosity in chloroform at 25° C (ISO 1628 Part 6) greater than or equal to 65 ml/g, and/or
- d) a (meth)acrylate (co)polymer other than a) having a solution viscosity in chloroform at 25° C (ISO 1628 Part 6) of 50 to 55 ml/g,

where each of the individual components a), b), c) and/or d) may be individual polymers or a mixture of polymers, where the entirety of a), b), c) and/or d) is 100 % by weight of the polymer mixture; and

where a test specimen produced from the polymer mixture simultaneously has the following properties:

- I. a tensile modulus (ISO 527) of at least 2600 MPa,
- II. a Vicat softening point VSP (ISO 306 B50) of at least 109° C,

Appln. No. 10/575,477

Reply to the Office Action of September 18, 2007

III. an impact strength (ISO 179 2D, flatwise) of at least 17 kJ/m<sup>2</sup>, and

IV. a melt index MVR (ISO 1133, 230°C/3.8 kg) of at least 1.5 cm<sup>3</sup>/10 min.

Claim 2. (Previously Presented) The polymer composition according to Claim 1, wherein the components are present in the following quantitative proportions, their entirety being 100 % by weight:

a) from 25 to 75 % by weight

b) from 10 to 60 % by weight

c) and/or d) from 10 to 50 % by weight.

Claims 3 and 4. (Canceled)

Claim 5. (Previously Presented) The polymer composition according to Claim 1, wherein component b) has a two or three-shell structure.

Claims 6 and 7. (Canceled)

Claim 8. (Previously Presented) The polymer composition according to Claim 1, wherein component d) is a homopolymer or copolymer of at least 80 % by weight of methyl methacrylate and, optionally, up to 20 % by weight of other monomers copolymerizable with methyl methacrylate.

Claim 9. (Previously Presented) The polymer composition according to Claim 8, wherein component d) is a copolymer of from 95 to 99.5 % by weight of methyl methacrylate and from 0.5 to 5 % by weight of methyl acrylate.

Appln. No. 10/575,477 Reply to the Office Action of September 18, 2007

Claims 10 and 11. (Canceled)

Claim 12. (Previously Presented) An object prepared by injection moulding the polymer composition according to Claim 1.

Claim 13. (Previously Presented) A method for producing a molded object, comprising:

injection moulding the polymer composition of Claim 1 into the shape of an object which has the following properties:

- I. a tensile modulus (ISO 527) of at least 2600 MPa,
- II. a Vicat softening point VSP (ISO 306 B50) of at least 109°C,
- III. an impact strength (ISO 179 2D, flatwise) of at least 17 kJ/m<sup>2</sup>, and
- IV. a melt index MVR (ISO 1133, 230°C/3.8 kg) of at least 1.5 cm<sup>3</sup>/10 min.

Claim 14. (Canceled)

Claim 15. (Previously Presented) A molded part of a household device, a communication device, or a sport of a hobby device or a bodywork component employed in the construction of automobiles, ships or aircraft, comprising:

a shaped object prepared by injection molding of the polymer composition according to Claim 1.

Claim 16. (Canceled)
